

**Aim: What is DeMoivre's Theorem?****I. Do Now:**

1. Multiply

(a)  $(4i)(4i)$

(b)  $(4i)(4i)(4i)$

2. Multiply and convert to  $a + bi$  form.

(a)  $4\left(\cos\frac{\pi}{2} + i\sin\frac{\pi}{2}\right) \cdot 4\left(\cos\frac{\pi}{2} + i\sin\frac{\pi}{2}\right)$

(b)  $\left[4\left(\cos\frac{\pi}{2} + i\sin\frac{\pi}{2}\right)\right]^3$

**II. DeMoivre's Theorem** [ named after the French mathematician Abraham DeMoivre (1667–1754) ]If  $z = r(\cos\theta + i\sin\theta)$ 

$z^2 =$

$z^3 =$

$z^4 =$

$z^5 =$

If  $z = r(\cos\theta + i\sin\theta)$  is a complex number and  $n$  is a positive integer, then:

$z^n = \left[r(\cos\theta + i\sin\theta)\right]^n =$

To raise a complex number to a power:

i)

ii)

**III. Applications**3. Use DeMoivre's Theorem to find  $(-1 + i\sqrt{3})^{12}$ 4. Evaluate  $(-1 + i)^8$ 5. Find  $\sqrt{i}$  in  $a + bi$  form.**HW38**

- Read page 448.
- p. 453: 72, 73, 107, 108
- p. 460: 110
- Find  $\sqrt[3]{i}$  in  $a + bi$  form.
